DETAILED ACTION

1. Examiner regrets the untimely reopening of prosecution.
2. Examiner acknowledges cancelled claims 1-22 and 24.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 23 and 25-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Matz et al., U.S. Patent Number 5,821,539.

Matz discloses a radiation detector such as an x-ray detector that has light-emitting properties (see column 1, lines 5-29). Additionally, the reference discloses that the detector is divided into at least two sub-electrodes as per instant claim 23 (see column 3, lines 23-33). Figure 2c shows the sub-electrodes that have a fusible link (electrical connection) whereby the current at each sub-electrode can be determined independently of the other sub-electrodes (also see column 3, lines 29-30). Also, Figure 2c shows the sub-electrodes arranged to create an ordered array of parallel rows and columns as per instant claim 25. The arrangement of the sub-electrodes will inherently allow the light emission to be continuous across the whole area as per instant claim 26.
